TITLE : INTERLINING CLOTH OF CURTAIN
AND ITS PRODUCTION

ABSTRACT : PROBLEM TO BE SOLVED: To obtain an interlining cloth of curtain producible from wide woven fabric.

SOLUTION: A sheath core type conjugate filament comprising a sheath material made of a low-melting resin component and a core material composed of a resin component having a higher melting point is used as the whole or a part of a warp group and/or a weft group. The warp density of a part to be cut is made into a high density of more than three times the warp density of other parts to weave a wide woven fabric, which is heat-treated and cut.
